# FORKLIFT IMPACT PROTECTION IN CHEMICAL PLANT

*Metal column guard damaged by forklift impacts.*

*New flexible A-SAFE column guard system.*

## Flexible Column Guard Prevents Damage from Forklift Collisions

A chemical manufacturing plant producing plastic materials faced repeated forklift collisions with a key building support column. Their existing metal guard had become bent and ineffective. To solve the problem, they contacted Banks Industrial Group, who supplied an A-SAFE iFlex Double Rail Column Guard and eFlex Fork Guards. These flexible polymer barriers absorb impact and reform, unlike steel which dents or fails. The eFlex Fork Guard provided added low-level protection. The customer easily installed the system themselves and was highly satisfied with the result—gaining long-term structural protection, improved safety, and reduced maintenance costs without disrupting operations.

*A-SAFE Barriers are flexible and reform after impact for repeat use.*
